Whose face did the mRNA vaccine researcher win the Nobel Prize? - Temple of Literature - World Wide Blog - World Wide Reader Network (Computer Version)

Xinhua News Agency, Beijing, October 2 (Reporter Luo Guofang): "Sweden's Caroline Medical School announced on the 2nd that it would award the 2023 Nobel Prize in Physiology or Medicine to Catherine Corrico and Drew Wesman in recognition of their breakthrough discoveries in messenger ribonucleic acid (mRNA) research, which helped Vaccine development has reached an unprecedented speed"... "Based on this technology, mRNA vaccines for Zika virus and Middle East respiratory syndrome coronavirus have been developed. After the outbreak of COVID-19, two base-modified mRNA vaccines encoding the surface protein of COVID-19 have been developed at a record speed. The flexibility and speed of mRNA vaccine development are impressive, paving the way for the use of new platforms to develop other infectious disease vaccines. In the future, this technology can also be used to transport therapeutic proteins and treat certain types of cancer.

THE NOBEL PRIZE IN PHYSIOLOGY OR MEDICINE 2023

Katalin Karikó Drew Weissman

"for their discoveries concerning nucleoside base modifications that enabled the development of effective mRNA vaccines against COVID-19"

Reporter Luo Guofang's article is impeccable. It reflects that there are still serious scientists and journalists who are familiar with scientific development in mainland China. The strictly controlled official media changed its attitude in the past and allowed such a slap in the face to be published, which is really a helpless choice. Is it reformed, or is it a conscience discovery? You think too much! In the past, the propaganda technique of playing in front of the stage and behind the scenes resulted

in the failure of zeroing and economic collapse, and we had to step on the brakes in time. Fortunately, this big external announcement was relatively clever, and it did not clearly say that the Nobel Prize judges were bought by "hostile forces".

Sadly, in the past four years of the great disaster of the human century, in the face of millions to 20 millions (estimated figures) of virus deaths, there are very few Chinese scientists and media who have the courage to tell the truth, and those who stand for ignorance and shamelessness are caught. Man-made lies and conspiracy theories are pervasive in the media, especially Chinese networks and social platforms such as WeChat. There are countless slanders, fake data, articles, platforms, slogans and all kinds of behind-the-back demolition tricks of mRNA vaccine research, which have not disappeared until recently. Not many people can't see it. In the strictly controlled network, the general background of these coquettish operations is the same group of evil people as the ones that allowed Luo Guofang's articles to publish. So far, without scientific basis and evidence, many small media and bloggers are still spreading the direct causal relationship between mRNA vaccines and cancer, AIDS, etc. They may have lamented that they have not received clear instructions from the Ministry of Propaganda, or that they have not yet taken a face.

It is not excluded that a considerable number of people are victims of lies, blind people, or dissenters with mRNA technology. A normal society should tolerate these people, and they deserve sympathy and understanding. Under the banner of "anti-communist", some people inadvertently helped the platform of Dawai Propaganda. But it is doubtful to the point of hoarse opposition. Netizens should be wary of and stay away from those "experts" who have a background in science and engineering, or even a biomedical foundation, and maliciously spread rumors and stir up trouble. Are there few examples of "science and technology celebrities" who refuse to get the mRNA vaccine and curse

this technology to be directly beaten in the face by the virus? The deceased is the largest, so no more examples. It has long been a scientific consensus that mRNA vaccines have significantly reduced the severity and mortality rates. Therefore, in such a short period of time after the outbreak of the epidemic, researchers have won decades of hard reward: the 2023 Nobel Prize in Physiology or Medicine.

There is also a simple explanation here: any vaccine, medicine or food, etc., can always find unfavorable factors, or should be cautious and use taboos. The key is to measure the advantages and disadvantages of the whole population. It can't be said that airplanes, trains or cars will have accidents, and they will die and be abandoned, right? Such a simple truth has been distorted countless times in the more than three years of the epidemic, and many people's hearts have been ruined.

Several barbaric and authoritarian dictatorships such as Russia and Iran also slander and slander the technology of the United States on the Internet. Their false information is quoted and shared with each other. According to the recent report of How the People's Republic of China Reshapes the Global Information Environment, "China is using various methods for publicity, including buying shares of media institutions and using social media. The report warns that if Beijing's information manipulation is not controlled, China's efforts will reshape the global information landscape, create bias and gaps, and even lead countries to make decisions to put their economic and security interests under Beijing's interests. It has been revealed that the Communist Party of China has hired millions of cyber hackers and sailors for this purpose, spending 10 billion US dollars. At the same time, the mainland has taken strict blocking and ban measures to cover up and distort the truth. The development and application of virus tracing and mRNA vaccines is a test for those who have a conscience, independent thinking and critical spirit, and it is also the rare and most valuable experience in life.

The two-handed strategy of the Communist Party of China is also reflected in the development of mRNA vaccines, which is completely a realistic reflection of a psychopathic society. On the one hand, the media widely instigate and control to slander mRNA technology, and on the other hand, they desperately plagiarize or steal other people's achievements without changing their true colors. Using more small media to keep the wind, the mainland is also developing mRNA vaccines, and it is also bragging about bottomless propaganda. However, with the exposure of the truth, the overall failure of the mainland's "deviral" vaccine, Da Da Da Xuan's face was beaten to blue and swollen. The price is timeless and huge: people not only did not see the only country that "won completely" after the epidemic, but also did not see the victory of all countries coming to the court to "copy homework". On the contrary, they buried the hope of the national fortune, people's livelihood and the people. Human beings, especially powerful Chinese people with confidence, ignorance and superiority, should learn some basic lessons in life: why does high-tech always appear in the United States or Western countries?

At the end of 2019, when the epidemic began, I wrote many articles on the origin of the virus by using what I had seen and heard in the mainland, the early online evidence, and the information open window that the mainland did not have time to respond and control. In March 2020, after the full-scale outbreak of the epidemic in the United States, attention began to be paid to the development and application of new vaccines. Although he was not an insider in the industry, he consulted other professionals to carefully explore and observe the theory of mRNA in response to the chaotic public opinion and public opinion at that time. The advantages and disadvantages, safety and subsequent effects of new and old vaccines are all written in the following blog posts. It is only used as a historical record for netizens' reference and judgment.
